Abstract of EP0532974

A plurality of strip-like terminals (31) project out in parallel from an insulating body (21) of an electrical part and the surface of the terminals are held perpendicular to the bottom (21a) of the insulating body. The lower marginal edge of each terminal forms a straight connection edge, which lies in a plane parallel to the bottom of the insulating body and is soldered to the corresponding conductor land (14) on a printed circuit board (13).
